

Skills

- data storage
- query languages
- database management systems
- database development tools
- data
- data warehouse
- manage cloud data and storage
- Snowflake Modeling
- Snowflake Data warehouse
- develop with cloud services
- design database in the cloud
- automate cloud tasks
- design cloud architecture
- data security principles
- data protection
- data extraction, transformation and loading tools

Language Skills

- **Italian**: Mother tongue
- **English**
  - Listening: C1
  - Reading: C1
  - Spoken production: B2
  - Spoken interaction: C1
  - Writing: B2

Marco Scatassi

Date of birth: 10/12/1999 | Gender: Male | Nationality: Italian | Email address: marco.scatassi@nimbusintelligence.com | Work address: (Italy)

Work experience

University research support worker

01/03/2022 - 31/10/2022

Norwegian School of Economics | Bergen NO | Bergen, Norway

- data collection and API integration (automated traffic data retrieval, real-time data sourcing)
- data cleaning and preprocessing (handling missing values, data transformation, preparation for modeling)
- stochastic optimization and facility location (modeling uncertainty, emergency service location problems)
- model evaluation and comparison (testing different optimization strategies, performance benchmarking)
- interactive dashboard development (creating Streamlit applications for data visualization and inspection)

Database administrator

01/06/2024 - 31/07/2025

Nimbus Intelligence | Milano, Italy

- **Administration of Snowflake accounts**, including the configuration and management of Organizations, Accounts.
- **Role-Based Access Control (RBAC) management**, designing and implementing security hierarchies to ensure least-privilege access.
- **Optimization of Virtual Warehouses**, monitoring credit consumption and configuring auto-scaling to balance performance and cost-efficiency.
- **Database object maintenance**, including the management of schemas, tables, and views, as well as Cloning and Time Travel for data recovery.
- **Performance tuning and query profiling**, identifying bottlenecks using Query Profile and implementing clustering keys to improve data retrieval.
- **Storage and data lifecycle management**, overseeing data loading (Snowpipe/COPY INTO) and monitoring storage costs.
- **Governance and compliance auditing**, utilizing Account Usage and Information Schema to track user activity and resource utilization.
- **Development of interactive Streamlit applications** in Python to provide stakeholders with self-service data visualization and administrative dashboards directly within the Snowflake ecosystem.

Cloud engineer

01/08/2025 - Current

Nimbus Intelligence | Milano, Italy

- **Automated infrastructure provisioning** using Infrastructure as Code (IaC) tools to manage Snowflake resources (warehouses, databases, and roles), specifically Terraform.
- **Development of CI/CD pipelines** in GitLab using Python to automate deployment workflows and infrastructure lifecycle management.
- **Design and implementation of private connectivity**, ensuring secure integration between Snowflake and external cloud providers or on-premises tools.
- **Configuration of secure access for Wiki.js**, managing user authentication and documentation structure for internal knowledge

sharing.

- **Coordination of cross-account data sharing**, implementing Snowflake Data Shares and Private Exchanges to enable secure, real-time data collaboration with external partners and internal business units.

Education & Training

Master's degree in Data Science

01/10/2021 - 31/03/2023

University of Milano-Bicocca | MI | Milano, Italy

- statistical modeling and machine learning (supervised and unsupervised learning, predictive analysis)
- big data and distributed computing (cloud technologies, database management, scalability)
- programming and data engineering (Python, R, SQL, data pipelines and visualization)
- mathematical optimization (stochastic processes, decision theory, algorithmic efficiency)

Level in EQF: 7

Bachelor's degree in Mathematics

01/03/2018 - 30/09/2021

Alma Mater Studiorum - University of Bologna | BO | Bologna, Italy

- calculus and mathematical analysis (calculus, linear algebra, geometry)
- modeling and numerical computing (algorithms, programming, complex problem solving)
- probability and statistics (data analysis, probability theory)
- logic and scientific method (abstraction skills, logical and deductive reasoning)

Level in EQF: 6

Certifications

SnowPro Advanced: Administrator Certification

16/04/2026

Snowflake | Work based

SNOWPRO ADVANCED: ADMINISTRATOR OVERVIEW

This certification test the ability to:

- Manage and administer Snowflake accounts, data security, and governance
- Manage and maintain database objects and virtual warehouses
- Perform database monitoring, tuning, and optimization
- Perform data sharing and use the Snowflake Marketplace
- Implement disaster recovery, perform backups, and replicate data

Academy Accreditation - Databricks Fundamentals

18/06/2024

Databricks | Work based

Earners of the Databricks Fundamentals accreditation have demonstrated

the understanding of fundamental concepts related to Databricks Data Intelligence Platform.

https://credentials.databricks.com/1216dce9-92f9-4b08-bf4f-fc61c6648161#acc.tFhWm9qX

dbt Analytics Engineering

04/04/2024

dbt Labs | Work based

The Analytics Engineering Certification Exam evaluates your ability to build, test, and maintain models for data accessibility while using dbt to apply engineering principles to analytics infrastructure.

https://credentials.getdbt.com/59fc50d8-3716-4342-a1d0-ac9a1681badb#acc.A0vR7iWo

SnowPro Core Certification

09/02/2024

Snowflake | Work based

The SnowPro Core Certification Exam demonstrates an individual's knowledge to apply specific core expertise implementing and migrating to Snowflake. A SnowPro Core Certified individual has a thorough understanding of the Snowflake's Platform, and has the knowledge necessary to design, develop, and manage secure, scalable Snowflake solutions to drive business objectives.

•Perform data loading and transformation

•Monitor and optimize virtual warehouse performance and concurrencies

•Execute DDL and DML queries

•Use structured, semi-structured, and unstructured data

•Use cloning, Time Travel, and Fail-safe to manage data

•Facilitate Secure Data Sharing among different Snowflake accounts

•Design and manage the structure of a Snowflake account
